

Subject parameter distribution:

$$\underbrace{\begin{bmatrix} \text{int1}_i \\ \text{int2}_i \\ \text{slope1}_i \\ \text{slope2}_i \end{bmatrix}}_{\phi(i)} \approx N \left(\begin{bmatrix} 2.867 \\ 2.574 \\ 0.275 \\ 0.193 \end{bmatrix}, \begin{bmatrix} 2.867 & 2.922 & 0.071 & 0.044 \\ 2.922 & 3.315 & 0.058 & 0.014 \\ 0.071 & 0.058 & 0.036 & 0.037 \\ 0.044 & 0.014 & 0.037 & 0.045 \end{bmatrix} \right)$$

Initial latent states:

$$\underbrace{\begin{bmatrix} \text{eta1} \\ \text{eta2} \end{bmatrix}}_{\eta(t_0)}(t_0) \sim N \left(\underbrace{\begin{bmatrix} 2.867 \\ 2.574 \end{bmatrix}}_{\text{T0MEANS}}, \underbrace{\begin{bmatrix} 2.645 & 2.922 \\ 2.922 & 3.315 \end{bmatrix}}_{\text{T0VAR}^*} \right)$$

Deterministic change:

$$\underbrace{d \begin{bmatrix} \text{eta1} \\ \text{eta2} \end{bmatrix}}_{d\eta(t)}(t) = \underbrace{\begin{bmatrix} 0 & 0 \\ 0 & 0 \end{bmatrix}}_{\text{A}_{\text{DRIFT}}} \underbrace{\begin{bmatrix} \text{eta1} \\ \text{eta2} \end{bmatrix}}_{\eta(t)}(t) + \underbrace{\begin{bmatrix} 0.275 \\ 0.193 \end{bmatrix}}_{\text{b}_{\text{CINT}}} dt +$$

Random change:

$$\underbrace{\text{cholsdcor} \left\{ \begin{bmatrix} 0 & 0 \\ 0 & 0 \end{bmatrix} \right\}}_{\text{G}_{\text{DIFFUSION}}} \underbrace{d \begin{bmatrix} W_1 \\ W_2 \end{bmatrix}}_{d\mathbf{W}(t)}(t)$$

Observations:

$$\underbrace{\begin{bmatrix} y1 \\ y2 \\ y3 \end{bmatrix}}_{\mathbf{Y}(t)}(t) = \underbrace{\begin{bmatrix} 1 & 0 \\ 0 & 1 \\ 0 & 0.969 \end{bmatrix}}_{\text{Lambda}_{\text{LAMBDA}}} \underbrace{\begin{bmatrix} \text{eta1} \\ \text{eta2} \end{bmatrix}}_{\eta(t)}(t) + \underbrace{\begin{bmatrix} 0 \\ 0 \\ 3.139 \end{bmatrix}}_{\text{tau}_{\text{MANIFESTMEANS}}} + \underbrace{\begin{bmatrix} 0.207 & 0 & 0 \\ 0 & 1.098 & 0 \\ 0 & 0 & 0.538 \end{bmatrix}}_{\text{Theta}_{\text{MANIFESTVAR}}} \underbrace{\begin{bmatrix} \epsilon_1 \\ \epsilon_2 \\ \epsilon_3 \end{bmatrix}}_{\epsilon(t)}(t)$$

Latent noise per time step : $\Delta[W_{j \in [1,2]}](t - u) \sim N(0, t - u)$ Observation noise: $[\epsilon_{j \in [1,2]}](t) \sim N(0, 1)$

Linearised approximation of subject parameter distribution shown.

Individual specific notation (subscript i) only shown for subject parameter distribution – pop. means shown elsewhere.

cholsdcor converts lower tri matrix of std dev and unconstrained correlation to Cholesky factor covariance.

covsdcor = transposed cross product of *cholsdcor*, to give covariance.

See Driver & Voelke (2018) p11.
